Sriram MS

Backend Engineer
Bangalore, India | +91 6374033262 | santhanamsriram07@gmail.com | LinkedIn

Professional Summary

Backend Engineer with 3.5+ years building high-traffic Java/Spring Boot services on AWS at scale. Comfortable owning work end-to-end — from system design through production delivery and collaborating across engineering and partner teams. Experienced across the stack, from identity security and performance optimization to cloud-native infrastructure. Also experienced in end-to-end AI solution delivery, including agentic systems with RAG, LangGraph, and MCP-driven automation.

Technical Skills

Languages:	Java (8, 11, 21), Python, SQL
Backend:	Spring Boot, Spring Security, Spring Data JPA/Hibernate, Kafka, FastAPI
APIs/Security:	Microservices, REST APIs, JWT, OAuth2, OIDC
Cloud & DevOps:	AWS (Lambda, CloudWatch, S3, RDS, EC2, ECS), Docker, Kubernetes/OpenShift, CI/CD (Jenkins), Git, Maven
Data & Resilience:	PostgreSQL, Redis, Resilience4j (Circuit Breakers)
Testing & QA:	JUnit 5, Mockito, SonarQube
GenAI:	LLM integrations (API-based), LangGraph, MCP, RAG, AWS Bedrock

Professional Experience

Associate Solution Advisor, *Deloitte USI — Bangalore, India* August 2024 – Present

- Designed and built core Spring Boot (Java 21) microservices for a government health-benefits application serving 8M users.
- Modernized cloud infrastructure by refactoring a legacy EC2-based malware scanning service into AWS Lambda. Implemented S3 event triggers for real-time processing, reducing infrastructure costs by 70%.
- Led the strategic migration of 4 microservices from Java 8 to Java 21, refactoring 30+ synchronous APIs to non-blocking WebClient. Improved throughput and p95 response time from 600ms to 300ms.
- Introduced Redis look-aside caching for hot User Profile reads and reference/lookup data, eliminating redundant PostgreSQL reads on high-frequency read paths and reducing database load.
- Orchestrated OIDC/OAuth2 federation for 3 government partners, implementing JIT provisioning and attribute mapping to cut onboarding time from 48 hours to under 2 minutes.

Analyst, *Deloitte USI — Bangalore, India* August 2022 – August 2024

- Owned and built the end-to-end authentication and authorization security stack from scratch using Spring Security, implementing stateless JWT-based access control for a custom identity bridge.
- Hardened 3rd-party API integrations against partner instability using circuit breakers and retry policies (Resilience4j), improving p95 latency from 1.2s to 700ms and reducing timeout-related failures during partner incidents.
- Optimized data access layers for a high-volume PostgreSQL database. Diagnosed and resolved Hibernate N+1 query issues by restructuring Entity relationships and implementing batch fetching.
- Established over 90% unit test coverage as a team standard and enforced code quality and security gates via SonarQube, reducing production defect rate.

Projects

Autonomous ITSM Resolution Agent

- Built an agentic AI ITSM support assistant (Python/FastAPI, LangGraph) with human-in-the-loop approval gates to meet compliance requirements.
- Implemented RAG with a vector database for SOP-driven contextual analysis, enabling accurate and context-aware resolution recommendations.
- Integrated MCP for automated tool-assisted resolution actions, directly reducing mean-time-to-resolution from 35 minutes to 15 minutes.

Education

Bachelor of Technology, Electrical and Electronics Engineering 2018 – 2022
SASTRA University, Thanjavur CGPA — 7.97
